

How to Try the Analytics Chat Assistant (2–3 Minutes)

Live Demo:

<https://analytics-chat-17391180742.us-central1.run.app>

Reset Session:

https://analytics-chat-17391180742.us-central1.run.app/reset_session

This demo lets you explore Marketing, Revenue, and Sports analytics using natural language — no dashboards or SQL required.

Step 1 — Start with Marketing (default)

When the page loads, you're in Marketing Analytics.

Try:

Show the main dashboard

You'll see the marketing overview dashboard load below the chat.

Step 2 — Apply Filters Using Natural Language

Now try modifying the analysis:

Remove Facebook and Email

Then:

Add Partnership

Notice how:

- The chart updates automatically
- The chat shows a summary of applied filters
- You never touch a filter UI

Step 3 — Ask “Why” (Executive Explanation)

Now ask a diagnostic question:

Why did CAC increase?

What happens:

- The chart does not change
- The assistant explains likely causes and checks
- The response is based on analytics metadata (not guesses)

This mimics how a senior analyst would explain results.

Step 4 — Switch Domains (Marketing → Sports)

Now change analytical context completely:

Switch to sports

The system:

- Changes domain
- Loads a new master dashboard
- Resets assumptions automatically

Step 5 — Explore Sports Performance Analytics

Try:

Show goals vs xG

Then:

Only Arsenal

You'll see:

- Sports-specific metrics
- Domain-specific filters
- No confusion between marketing and sports concepts

Step 6 — Ask for Definitions (RAG in Action)

Try:

What is xG?

The assistant:

- Pulls the definition from curated metadata
- Explains it in plain executive language
- Does not rely on raw data queries

What This Demo Shows

- ✓ Natural language → filters → charts → explanations
- ✓ Session-aware analytics conversation
- ✓ Multiple analytics domains using one architecture
- ✓ Safe, explainable AI (no hallucinated insights)

Tips for Best Experience

- Use simple, natural language
- Try “add”, “remove”, “only”, “why”, “what does this show”
- Don’t worry about exact phrasing — the system handles variation

Why This Matters

This demo represents how modern analytics platforms should work:

- AI-assisted
- Explainable
- Domain-aware
- Built for decision-makers, not just analysts
